## MishMash Bazaar VR

### One-sentence description

*A VR bazaar where you can experience different cultures through **food, festivals, clothing, trinkets, performances, and places**, supported by AI translation and guided by NPCs, with **misunderstandings turned into meaningful moments of learning**.*

### Explanation of the world

**MishMash Bazaar VR** is a virtual culture world built as a **lively bazaar** with a central square and interactive areas like **stalls, social corners, and a small stage for cultural performances**. Each area represents a different culture and offers cultural elements that users can explore and interact with, including food, festivals, clothes, trinkets, and dances.

**Communication is a core part of the experience**. The world includes languages and **automatic AI translation** so users can interact across language barriers. At the same time, the bazaar highlights intercultural challenges by **showing how some words and phrases do not carry the exact same meaning in different languages**. These moments can create small misunderstandings, which become part of the gameplay and learning experience rather than something to avoid.

To support exploration, the world includes NPCs that users can approach and ask for different things, such as **explanations of traditions, the meaning of an object, how a festival is celebrated**, or how to say something more appropriately in a specific context. This creates a space where everyone has a voice, and where cultural discovery happens through interaction, curiosity, and shared experiences.
